Outdoor Lighting Perspectives

Outdoor Lighting Perspective is your best source if you're looking for experience, reliability, artistic designs and fair pricing. We customize our designs for each client and we offer the highest quality lighting fixtures available today. We create architectural and landscape solutions for residential and commercial properties. For us, each projects is unique, as unique as your home.

Outdoor Lighting is our Specialty

Different trade professionals, such as landscapers or electricians, offer and install outdoor lighting systems. Only an outdoor lighting specialist knows how to create a custom design that will maximize the lighting effect, reduce the impact of the installation on your property, and ensure regular and professional maintenance of the system. Furthermore, only a dedicated outdoor lighting specialist can be aware of the newest technologies. We offer a complete turnkey solution; outdoor lighting is our sole focus.

We Install Low Voltage Systems

We offer LED low voltage lighting systems. This technology allows us to illuminate any area with soft, ambient light while using less energy. An LED system will use 80% less energy than a halogen system!

Our Fixtures

Our fixtures are made of copper, brass, or heavy duty PVC. The well lights include a heavy duty glass cover that protects the bulb from the elements, mulch, and other landscape debris. We make sure that each fixture is chosen according to the subject it illuminates to maximize the lighting effect.

The Installation Process

Outdoor Lighting Perspectives' trained professionals will install your system. We do not sub-contract any part of a project and we hold our installation specialists to the highest standards and procedures.

Service and Maintenance

We offer an Annual Maintenance Program that ensures your system remains in top shape year after year. We perform a 9-point routine service including necessary bulbs, repairing any damaged wires, inspecting the connection, checking the transformers, etc. We also perform or suggest simple modifications to the design to accommodate landscape growth and enhance the lighting effect.

Controls

Our systems come with a digital timer that turns the lights on and off automatically adjusting for everyday time change and Daylight Savings Time.

Warranty

Our worry-free warranty is one of the best available today. It includes a lifetime warranty on transformers and fixtures. 10 years on wire and brass glass covers. 5 years on LED bulbs. 2 years on timers and light control components, and 1 year on halogen bulbs, glass and plastic lens covers, and commercial fixtures.
